DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-10, 16-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Funkenbusch of record for reasons of record in view of Ghosal et al. (Ghosal), WO 97/47382.

The Funkenbusch does not disclose each and every type of organic material attached to the carbon. The Ghosal patent discloses the claimed types of organic materials attached to the carbon absorbents used in the chromatography (see pages 10-15).

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Funkenbusch with the teachings of the Ghosal patent, because the reference discloses that the organic compound added to the carbon provides the benefit of increased adsorption capacity.

Response to Arguments

Applicant's arguments with respect to claims 1-10, 16-49 have been considered but are moot in view of the new ground(s) of rejection.

Applicants argue that the Funkenbusch patent does not disclose the attachment of the organic to the carbon. The reference discloses the coating of the carbon particle with the organic material. This coating would read upon the limitation to the attachment recited in the claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (703) 308-2528. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.
